Safety Information

Explanation of Safety Messages

Precautionary statements [“DANGER,” “WARNING,” and “CAUTION”], followed by specific instructions, are found in this manual and on machine decals. These precautions are intended for the personal safety of the operator, user, servicer, and those maintaining the machine.

DANGER

Indicates an imminently hazardous situation that, if not avoided, will cause severe personal injury or death.

WARNING

Indicates a hazardous situation that, if not avoided, could cause severe personal injury or death.

CAUTION

Indicates a hazardous situation that, if not avoided, may cause minor or moderate personal injury or property damage.

Additional precautionary statements [“IMPORTANT” and “NOTE”] are followed by specific instructions.

IMPORTANT: The word “IMPORTANT” is used to inform the reader of specific procedures where minor machine damage will occur if the procedure is not followed.

NOTE: The word “NOTE” is used to communicate installation, operation, maintenance or servicing information that is important but not hazard related.

Important Safety Instructions

WARNING

To reduce the risk of fire, electric shock, serious injury or death to persons when using your washer, follow these basic precautions:

W023

- Read all instructions before using the washer.
- Install the washer according the INSTALLATION instructions. Refer to the GROUNDING instructions in the INSTALLATION manual for the proper grounding of the washer. All connections for water, drain, electrical power and grounding must comply with local codes and be made by licensed personnel when required. It is recommended that the machine be installed by qualified technicians.
- Do not install or store the washer where it will be exposed to water and/or weather.
- To prevent fire and explosion, keep the area around machine free from flammable and combustible products. Do not add the following substances or textiles containing traces of the following substances to the wash water: gasoline, kerosene, waxes, cooking oils, vegetable oils, machine oils, dry-cleaning solvents, flammable chemicals, thinners, or other flammable or explosive substances. These substances give off vapors that could ignite, explode or cause the fabric to catch fire by itself.
- Under certain conditions, hydrogen gas may be produced in a hot water system that has not been used for two weeks or more. HYDROGEN GAS IS EXPLOSIVE. If the hot water system has not been used for such a period, before using a washing machine or combination washer-dryer, turn on all hot water faucets and let the water flow from each for several minutes. This will release any accumulated hydrogen gas. The gas is flammable, do not smoke or use an open flame during this time.
- To reduce the risk of an electric shock or fire, DO NOT use an extension cord or an adapter to connect the washer to the electrical power source.
- Do not allow children to play on or in the washer. Close supervision of children is necessary when the washer is used near children. This appliance is not intended for use by young children or infirm persons without supervision. Young children should be supervised to ensure that they do not play with the appliance. This is a safety rule for all appliances.
- DO NOT reach and/or climb into the tub or onto the washer, ESPECIALLY if the wash drum is moving. This is an imminently hazardous situation that, if not avoided, will cause severe personal injury or death.
- Never operate the washer with any guards, panels and/or parts removed or broken. DO NOT bypass any safety devices or tamper with the controls.
- Use washer only for its intended purpose, washing textiles. Never wash machine parts or automotive parts in the machine. This could result in serious damage to the basket or tub.
- Use only low-sudsing, no-foaming types of commercial detergent. Be aware that hazardous chemicals may be present. Wear hand and eye protection when adding detergents and chemicals. Always read and follow manufacturer’s instructions on packages of laundry and cleaning aids. Heed all

warnings or precautions. To reduce the risk of poisoning or chemical burns, keep them out of the reach of children at all times [preferably in a locked cabinet].

- Do not use fabric softeners or products to eliminate static unless recommended by the manufacturer of the fabric softener or product.
- Always follow the fabric care instructions supplied by the textile manufacturer.
- Loading door MUST BE CLOSED any time the washer is to fill, tumble or spin. DO NOT bypass the loading door switch by permitting the washer to operate with the loading door open. Do not attempt to open the door until the washer has drained and all moving parts have stopped.
- Be aware that hot water is used to flush the supply dispenser. Avoid opening the dispenser lid while the machine is running.
- Do not attach anything to the supply dispenser's nozzles, if applicable. The air gap must be maintained.
- Do not operate the machine without the water reuse plug or water reuse system in place, if applicable.
- Be sure water connections have a shut-off valve and that fill hose connections are tight. CLOSE the shut-off valves at the end of each wash day.
- Keep washer in good condition. Bumping or dropping the washer can damage safety features. If this occurs, have washer checked by a qualified service person.
- DANGER: Before inspecting or servicing machine, power supply must be turned OFF. The servicer needs to wait for at least 5 minutes after turning the power OFF and needs to check for residual voltage with a voltage meter. The inverter capacitor or EMC filter remains charged with high voltage for some time after powering OFF. This is an imminently hazardous situation that, if not avoided, will cause severe personal injury or death.
- Do not repair or replace any part of the washer, or attempt any servicing unless specifically recommended in the user-maintenance instructions or in published user-repair instructions that the user understands and has the skills to carry out. ALWAYS disconnect the washer from electrical, power and water supplies before attempting any service.
- Disconnect the power by turning off the circuit breaker or by unplugging the machine. Replace worn power cords.
- Before the washer is removed from service or discarded, remove the door to the washing compartment.
- Failure to install, maintain, and/or operate this washer according to the manufacturer's instructions may result in conditions which can produce bodily injury and/or property damage.

NOTE: The WARNINGS and IMPORTANT SAFETY INSTRUCTIONS appearing in this manual are not meant to cover all possible conditions and situations that may occur. Common sense, caution and care must be exercised when installing, maintaining, or operating the washer.

Any problems or conditions not understood should be reported to the dealer, distributor, service agent or the manufacturer.

WARNING

Machine installations must comply with minimum specifications and requirements stated in the applicable Installation Manual, any applicable municipal building codes, water supply requirements, electrical wiring regulations and any other relevant statutory regulations. Due to varied requirements and applicable local codes, this machine must be installed, adjusted, and serviced by qualified maintenance personnel familiar with applicable local codes and the construction and operation of this type of machinery. They must also be familiar with the potential hazards involved. Failure to observe this warning may result in personal injury, property damage, and/or equipment damage, and will void the warranty.

W820

IMPORTANT: Ensure that the machine is installed on a level floor of sufficient strength. Ensure that the recommended clearances for inspection and maintenance are provided. Never allow the inspection and maintenance space to be blocked.

WARNING

Never touch internal or external steam pipes, connections, or components. These surfaces can be extremely hot and will cause severe burns. The steam must be turned off and the pipe, connections, and components allowed to cool before the pipe can be touched.

SW014

Safety Decals

Safety decals appear at crucial locations on the machine. Failure to maintain legible safety decals could result in injury to the operator or service technician.

Use manufacturer-authorized spare parts to avoid safety hazards.

Operator Safety

WARNING

NEVER insert hands or objects into basket until it has completely stopped. Doing so could result in serious injury.

SW012

The following maintenance checks must be performed daily:

1. Verify that all warning labels are present and legible, replace as necessary.
2. Check door interlock before starting operation of the machine:
   a. Attempt to start the machine with the door open. The machine should not start.
   b. Close the door without locking it and start the machine. The machine should not start.
   c. Attempt to open the door while a cycle is in progress. The door should not open.

If the door lock and interlock are not functioning properly, disconnect power and call a service technician.

3. Do not attempt to operate the machine if any of the following conditions are present:
   a. The door does not remain securely locked during the entire cycle.
   b. Excessively high water level is evident.
   c. Machine is not connected to a properly grounded circuit.

Do not bypass any safety devices in the machine.

WARNING

Operating the machine with severe out-of-balance loads could result in personal injury and serious equipment damage.

W728

Introduction

Model Identification

Information in this manual is applicable to Design 2 models or later. Refer to the 12th position of the model number [e.g. *CN040*YVXU **2** 001]:

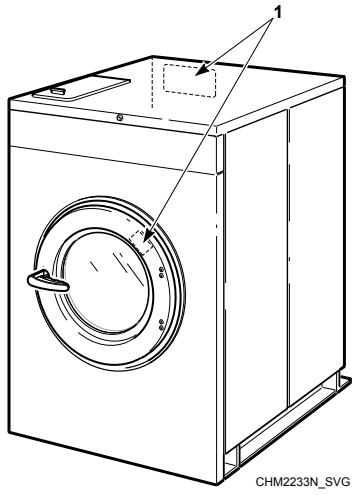
Delivery Inspection

Upon delivery, visually inspect crate, protective cover, and unit for any visible shipping damage. If signs of possible damage are evident, have the carrier note the condition on the shipping papers before the shipping receipt is signed, or advise the carrier of the condition as soon as it is discovered.

Serial Plate Location

The serial plate is located at the rear of the machine and inside door. Provide the machine's serial number and model number when ordering parts or seeking technical assistance. Refer to *Figure 1* .



1. Serial Plate

Figure 1

Replacement Parts

If literature or replacement parts are required, contact the source from which the machine was purchased or contact Alliance Laundry Systems at +1 (920) 748-3950 for the name and address of the nearest authorized parts distributor.

Customer Service

For technical assistance, contact your local distributor or contact:

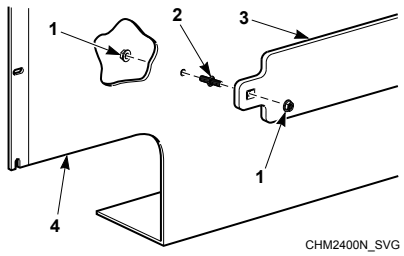
Table 15

Installation

Pallet Jack Cover Plate Removal [80 and 100 Pound Models Only]

Prior to installing an 80 and 100 pound machine, the optional pallet jack cover plate can be removed in preparation of re-installing to machine base frame after machine installation.

1. Locate cover plate on back panel.
2. Remove back panel.
3. Remove all hardware holding cover plate on back panel, refer to *Figure 16* . DO NOT DISCARD HARDWARE.
4. Remove cover plate.



1. Nut
2. Stud
3. Cover Plate
4. Back Panel

Figure 16

5. Re-install back panel.

NOTE: Refer to *Pallet Jack cover Plate Installation [80 and 100 Pound Models Only]* section to install cover plate to machine base after machine installation.

Single Machine Foundation Requirements

A minimum 3500 psi [refer to rating per supplier] reinforced concrete set on a prepared bed is required for all new machine installations.

NOTE: Do not mount on wooden floors, tile floors, elevated floor levels, stacked multiple base frames, or over basements or crawl spaces because of the high extract speed and the G-forces exerted. For 80 pound models and larger, do not mount on metal base frames.

Thoroughness of detail must be stressed with all foundation work to ensure a stable unit installation, eliminating possibilities of excessive vibration during extract.

WARNING

To reduce the risk of fire, serious injury, property damage and/or death, install the machine on a level (within 3/8 inch), uncovered concrete floor of sufficient strength at grade.

W787

For new foundations a mounting bolt template or an elevated metal base frame is available at extra cost. For all installations a concrete hardware kit is available at extra cost.

The machine must be anchored to a smooth level surface so that the entire base of the machine is supported and rests on the mounting surface.

IMPORTANT: Do not permanently support the machine on only four points with spacers. Grouting is required and spacers must be removed.

Machine Installation with Existing Floor

The existing floor slab must meet minimum requirements shown in *Machine Foundation and Pad Installation* per machine model. The floor must be reinforced concrete without voids under slab. If the floor meets these requirements and an elevated pad is NOT desired, refer to *Figure 1* and proceed to *Machine Mounting and Grouting* section.

Elevated Pad Installation with Existing Floor

The existing floor slab must meet minimum requirements shown in *Machine Foundation and Pad Installation* per machine. The floor must be reinforced concrete without voids under slab. If the slab meets these requirements and an elevated pad is desired, refer to *Figure 2* and proceed to *Machine Foundation and Pad Installation* section.

Elevated Base Frame Installation with Existing Floor

The existing floor slab must meet minimum requirements shown in *Machine Foundation and Pad Installation* per machine. The floor must be reinforced concrete without voids under slab. If the slab meets these requirements and an elevated base frame is desired, refer to *Figure 1* and *Figure 3* and proceed to *Machine Mounting and Grouting* section.

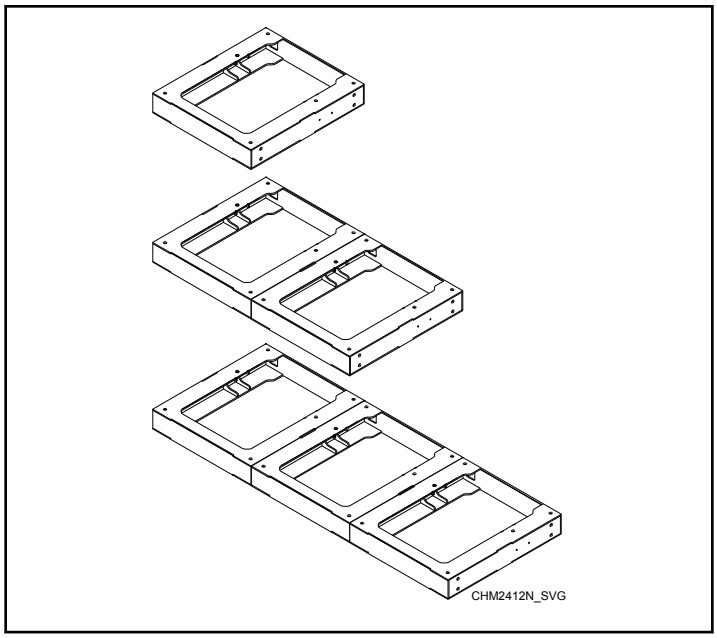


Figure 17

New Foundation

If the existing floor slab does not meet the single machine foundation requirements per model, refer to *Figure 3* and proceed to *Machine Foundation and Pad Installation* section.

Isolated Pad Installation

This type of installation is NOT recommended. Installer MUST consult a Structural Engineer for concrete specifications and requirements for installations that will not be tied into adjacent foundations.

IMPORTANT: The above instructions and recommendations are conservative specifications for a typical installation based on consultations with a structural engineer. Alliance Laundry Systems stands behind all installations meeting these specifications. For alternate installation specifications based on your soil type, location, building structure, unique floor geometry, machine types, and utilities, consult a structural engineer in your local area.

Machine Foundation and Pad Installation

A concrete pad may be constructed to elevate a machine. Care must be exercised in the design of the pad due to the force exerted by the machine during extract. This concrete pad, recommended not to exceed 8 inches [203 mm] above existing floor, must be placed, reinforced with rebar and tied to the existing floor. Refer to *Table 16* , *Figure 18* , *Figure 19* and *Figure 20* for multiple machine installations.

Machine Foundation and Pad Installation

Specification		20	30	40	60	80-100	125
Minimum Foundation Thickness	F-speed	4 in. [102 mm]	4 in. [102 mm]	4 in. [102 mm]	4 in. [102 mm]	6 in. [152 mm]	N/A
	V-speed			6 in. [152 mm]	6 in. [152 mm]	9 in. [229 mm]	12 in. [305 mm]
Minimum Excavation Depth	F-speed	8 in. [203 mm]	8 in. [203 mm]	8 in. [203 mm]	8 in. [203 mm]	12 in. [305 mm]	N/A
	V-speed			12 in. [305 mm]	12 in. [305 mm]	15 in. [381 mm]	18 in. [457 mm]
Minimum Pad Size							
Single machine [WxD]		31.4 in. x 34.8 in. [798 mm x 884 mm]	34.4 in. x 39.5 in. [874 mm x 1003 mm]	36.5 in. x 43.5 in. [927 mm x 1105 mm]	44.8 in. x 50.6 in. [1139 mm x 1285 mm]	57.5 in. x 49.2 in. [1461 mm x 1250 mm]	72 in. x 72 in. [1828 mm x 1828 mm]

Machine Foundation and Pad Installation						
Specification	**20**	**30**	**40**	**60**	**80-100**	**125**
Two machines, Side-by-side [WxD]	57.54 in. x 34.8 in. [1462 mm x 884 mm]	63.52 in. x 39.5 in. [1613 mm x 1003 mm]	67.38 in. x 43.5 in. [1711 mm x 1105 mm]	78.98 in. x 50.6 in. [2006 mm x 1285 mm]	99.5 in. x 49.2 in. [2527 mm x 1250 mm]	133 in. x 72 in. [3378 mm x 1828 mm]
Two machines, Back-to-back [WxD]	31.4 in. x 88.63 in. [798 mm x 2251 mm]	34.4 in. x 98.37 in. [874 mm x 2499 mm]	36.5 in. x 115.23 in. [927 mm x 2927 mm]	44.8 in. x 119.48 in. [1138 mm x 3035 mm]	51.5 in. x 130.56 in. [1308 mm x 3316 mm]	72 in. x 156 in. [1828 mm x 3962 mm]
NOTE: Inside and outside mounting only available on 80 and 100 pound models. N/A = Not Applicable						

Table 16

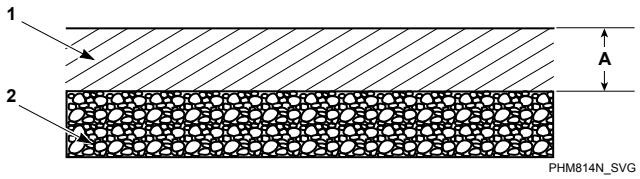
IMPORTANT: Do NOT install a pad on top of the existing floor. The foundation and pad must be constructed and tied together as one piece.

If the existing floor is not reinforced concrete at least of minimum thickness [depending on model], an elevated pad is desired or multiple machines are to be installed, the following steps must be performed [refer to *Figure 18* , *Figure 19* , and *Figure 20*]:

1. Cut a hole larger on all sides than the machine base through the existing floor, refer to *Table 16* .
2. Excavate to a depth as indicated in *Table 16* from the top of the existing floor.
3. If installing a foundation with elevated pad, prepare a form for the above-ground portion of the foundation. Verify that the top of the foundation is level. The height of the foundation pad must not exceed 8 inches [203 mm] above the existing floor.
4. Backfill with clean fill dirt.
5. Compact backfill, making sure to allow for correct concrete thickness.
6. Drill holes [refer to manufacturer's requirements for drill hole size] for the perimeter reinforcing bar at a depth of 2.5 inches [64 mm] into the existing floor. The reinforcing should be 12 inches [305 mm] on center each way around entire perimeter.
7. Clean out debris from each reinforcing bar hole.
8. Fill half the hole depth with acrylic adhesive.
9. Using #4 [60 ksi] reinforcing bar, tie new pad to existing floor making sure to tie reinforcing bars at the intersections and using proper reinforcing bar supports to hold bars at the proper depth in the pad.
10. Allow adhesive around reinforcing bar to cure properly, refer to adhesive manufacturer for recommended cure times.
11. Completely fill with 3500 psi minimum concrete up to the existing foundation level plus any added level [maximum of 8 inch [203 mm]] for the desired elevated pad. The concrete must be poured so that the entire foundation and pad cures as one piece.
12. Allow concrete to cure, refer to manufacturer's recommended cure times.
13. Using a mounting bolt template, elevated base frame or the machine base, mark where the holes should be drilled to mount the machine.

    NOTE: As an alternate method, cast in the Grade 5 (minimum SAE rating), 5/8 inches [16 mm] for 20-60 pound models and 3/4 inch [19 mm] for 80-125 pound models anchor bolts as the concrete is poured, refer to *Figure 22* . Ensure that the bolt threads extend a minimum of 3.5 inches [64 mm] above floor level and a minimum of 6 inches [89 mm] for 20-60 pound models, 5.5 inches [152 mm] for 80-100 pound models and for 125 pound models if the bolt is embedded in concrete.
14. Proceed to *Machine Mounting and Grouting* section.

Machine Installation



Existing Floor (refer to Table 9)

1. Existing Floor with 3500 PSI (minimum) Concrete
2. Compacted Fill (minimum 6 in. [152 mm])

Table 19

Machine Mounting and Grouting

NOTE: After the concrete has cured completely and the cast-in-place method was used, refer to *Figure 22* and proceed to step 7. If acrylic adhesive anchors are desired, refer to *Figure 21* and proceed with step 1 after concrete has cured completely.

1. Refer to *Table 20* to set the drill depth gauge.
2. Drill the holes to the set depth.
3. Use compressed air or squeeze bulb to clean out debris from each hole.
4. Fill half the hole depth with an industry-accepted adhesive anchoring system.
5. Insert anchor bolt until it reaches the bottom and a minimum of 2.5 inches [64 mm] extends above surface and a minimum of 3.5 inches [89 mm] for 20-60 pound models, 6 inches [127 mm] for 80-100 pound models or 5.5 inches [127 mm] for 125 pound models is embedded in concrete.
6. Ensure all air pockets are removed from adhesive surrounding the bolt.
7. Allow adhesive around bolt to cure completely.
8. Remove shipping materials and place the machine or elevated base frame carefully over the bolts.

   NOTE: Never attempt to lift the machine by the door handle or by pushing on the cover panels. Always insert a pry bar or other lifting device under the bottom frame of the machine to move it.

   IMPORTANT: DO NOT install 80 pound or larger machines on an elevated metal base frame.

9. Raise and level the machine or elevated base frame 0.5 inch [1.27 cm] off the floor on four corners, using spacers such as nut fasteners.

WARNING

Crush hazard. To avoid personal injury and/or property damage, do not tip the machine more than 25 degrees in any direction.

W793

10. Completely fill the space between the elevated base frame or machine base and the floor with a good quality **non-shrinking machinery precision grout** to ensure a stable installation. Grout completely under frame. Remove front panel and back panel to gain access to **entire perimeter of base plates**. Force grout under base until all voids are filled.

    IMPORTANT: Minimum Grade 5, SAE rating, flat washers and minimum Grade 5, SAE rating, serrated hex flange locknuts are the recommended hardware for anchoring machine or elevated base frame to anchor bolts.

11. Position the flat washers and locknuts on the anchor bolts and finger-tighten to machine base or elevated base frame.
12. Allow machine grout to set, but not cure.

    IMPORTANT: Refer to bolt manufacturer's recommended adhesive cure times.

13. Remove the spacers carefully, allowing the machine base or elevated base frame to settle into the wet grout.

NOTE: If installing a 20 through 60 pound model directly to finished floor, wait until grout is completely cured and skip to Step 18. If installing on elevated base frame, proceed to Step 14.

20-60 Pound Models

14. After the grout is completely cured, position the machine over the elevated base frame.

15. Align the mounting holes on the machine with the corresponding holes on the elevated base frame.

16. Install a bolt, flat washer and locknut in each mounting hole.

17. Hand tighten each nut.

a. Tighten the two rear nuts two turns.

b. Tighten the two front nuts two turns.

c. Tighten the two middle nuts firmly.

18. Torque all the locknuts to 90 ± 9 ft.-lbs. – one after the other – until all are tightened evenly and the machine is fastened securely to the elevated base frame or floor.

80 Pound and Larger Models

19. After the grout is completely cured, torque the locknuts to 150 ± 15 ft.-lbs. – one after the other – until all are tightened evenly and the machine is fastened securely to the floor.

IMPORTANT: Refer to recommended grout cure times from manufacturer before torquing locknuts.

NOTE: Check and retighten the locknuts after five to ten days of operation and every month thereafter.

N/A = Not Applicable								

Table 21

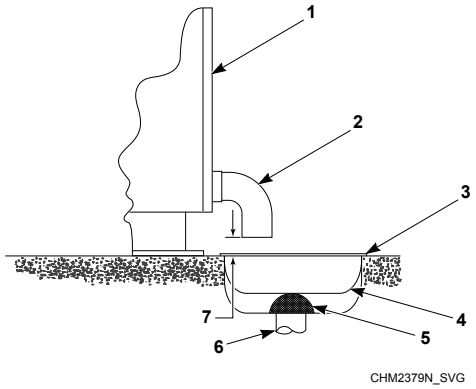
Drain Connection

IMPORTANT: Machine must be installed in accordance with all local codes and ordinances.

All drain systems must be vented to prevent an air lock or siphoning.

Use the supplied black rubber adapter and clamps to transition from the machine drain outlet to the 2 inches [51 mm] schedule 40 PVC plumbing [20 and 30 models] and the 3 inches [76 mm]schedule 40 PVC plumbing [40-125 models].

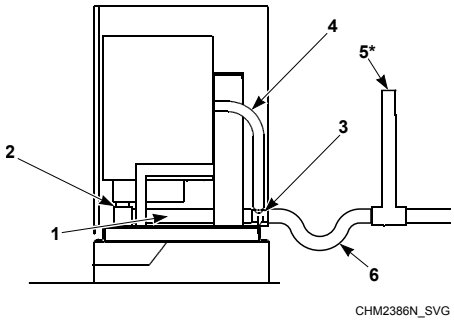
If proper drain size is not available or practical, a surge tank is required. A surge tank along with a sump pump should be used when gravity drainage is not possible.



Drain Trough System

1. Rear of Machine
2. Drain Pipe
3. Steel Grate
4. Drain Trough
5. Strainer
6. Waste Line
7. 1 in. [25 mm] minimum gap

Figure 23



* Drain line must be vented to meet local plumbing codes.

Direct Drain System

1. Drain Hose
2. Drain Valve
3. Drain Tee
4. Overflow Hose
5. Vent Pipe*
6. Trap [as required by local codes]

Figure 24

IMPORTANT: Increasing the drain hose length, installing elbows, or causing bends will decrease drain flow rates and increase drain times, impairing machine performance.

NOTE: Installation of additional machines will require larger drain connections. Refer to *Drain Line Sizing / Minimum Drain ID* .

Drain Information							
	20	**30**	**40**	**60**	**80**	**100**	**125**
Drain connection size	2 in. [51 mm]	2 in. [51 mm]	3 in. [76 mm*]	3 in. [76 mm*]	3 in. [76 mm*]	3 in. [76 mm*]	3.5 in. [89 mm*]
Overflow drain connection size	1.5 in. [457 mm]	1.5 in. [457 mm]	1.5 in. [457 mm]	1.5 in. [457 mm]	2.25 in. [686 mm]	2.25 in. [686 mm]	2.25 in. [686 mm]
Number of drain outlets	1	1	1	1	1	1	1
Drain flow capacity	25 gal/min [95 l/min]	30 gal/min [114 l/min]	40 gal/min [151 l/min]	50 gal/min [189 l/min]	55 gal/min [208 l/min]	55 gal/min [208 l/min]	70 gal/min [265 l/min]
Recommended drain pit size	2.0 ft^3 [57 l]	2.5 ft^3 [71 l]	3.5 ft^3 [128 l]	5.7 ft^3 [99 l]	8.0 ft^3 [221 l]	9.5 ft^3 [269 l]	13 ft^3 [368 l]
* Also works with 3 in. OD PVC pipe if connected to inside of drain tee connector.							

Table 22

Drain Line Sizing / Minimum Drain ID					
	Number of Machines				
Model	**1**	**2**	**3**	**4**	**5**

Table 23

Water Connection Requirements

WARNING

To prevent personal injury, avoid contact with inlet water temperatures higher than 125° Fahrenheit [51° Celsius] and hot surfaces.

W748

The maximum water inlet temperature for vended models is 125°F [51°C] and the recommended maximum water inlet temperature for on-premises models is 150°F [66°C].

Connections should be supplied by a hot and a cold water line of at least the sizes shown in *Water Supply Line Sizing* . Installation of additional machines will require proportionately larger water lines.

Connections should be supplied by a hot and a cold water line per national and local codes and in accordance with AS/NZS 3500.I.

To connect water service to a machine with hoses, use the following procedure:

1. Before installing hoses, flush the building's water system at the machine connection valves for at least two [2] minutes.
2. Check filters in the machine's inlet hoses for proper fit and cleanliness before connecting.
3. Hang hoses in a large loop; do not allow them to kink.

If additional hose lengths are needed or using hoses other than those supplied by manufacturer, flexible hoses with screen filters are required.

Cabinet Hardmount Water Supply Information		
Description	**Model**	**Requirement**
Water Inlet Connection size, in. BSP [mm]	20-125	3/4 [19]
Thread pitch, GHT [BSPP]	20-125	3/4 x 11.5 [3/4 x 14]
Number of water inlets	20-125	2
Number of auxillary water inlets	80-100	2
Recommended pressure, psi [bar]	20-125	20-85 [1.4-5.7]

Cabinet Hardmount Water Supply Information		
Description	**Model**	**Requirement**
Inlet flow capacity per inlet, gal/min at 85 psi [l/min at 5.5 bar]	20-100	5.2 [20]
	80-100 [Auxillary water inlets]	4.0 [15]
	125	50 [189]

Table 24

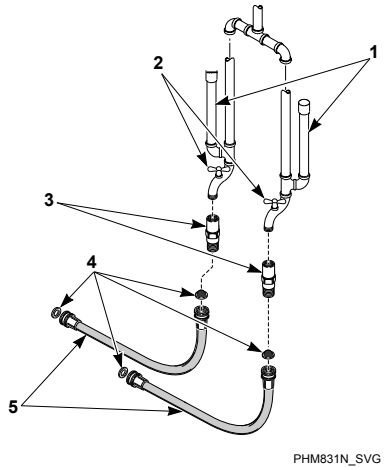
Water Supply Line Sizing			
Model	**Number of Machines**	**Supply Line Size**	
		Main	**Hot/Cold**
20–100	1	.75 in. [19 mm]	.75 in. [19 mm]
	2	1 in. [25 mm]	.75 in. [19 mm]
	3	1.25 in. [32 mm]	1 in. [25 mm]
	4	1.5 in. [38 mm]	1 in. [25 mm]
125	1	1.5 in. [38 mm]	1 in. [25 mm]
	2	2 in. [50 mm]	1.5 in. [38 mm]
	3	2 in. [50 mm]	2 in. [50 mm]
	4	2.5 in. [64 mm]	2 in. [50 mm]

Table 25

Suitable air cushions [risers] should be installed in supply lines to prevent "hammering." Refer to *Figure 25* .

Alliance Laundry Systems, LLC ranges of front loading commercial clothes washing machines have solenoid valves at the inlets. The water supply to the washing machines is supplied with an AB air gap between the soap tray and the drum. Minimum and maximum working pressure 1.4 bar and 8.3 bar. The machines are supplied with approved inlet hoses with a maximum inlet dimension of 0.50 inch [15 mm] [ID].

NOTE: This machine has a fluid category 5 backflow prevention device built in between the soap tray and drum.



1. Air Cushions [Risers]
2. Water Supply Faucets
3. Double Check Valves
4. Filters
5. Hoses

Figure 25

To comply with WRAS (IRN R150) and Australian water regulations, European standard EN1717 and Australian standard ATS5200.101, an approved double check valve backflow prevention device with the watermark is provided with the unit and must be fitted at the point of connection(s) between the supply and the fitting. Refer to *Figure 25* .

Figure 26

Electrical Installation Requirements

IMPORTANT: Electrical ratings are subject to change. Refer to serial plate for electrical ratings information specific to your machine.

DANGER

Electrical shock hazard will result in death or serious injury. Disconnect electric power and wait five (5) minutes before servicing.

W810

WARNING

Dangerous voltages are present inside the machine. Only qualified personnel should attempt adjustments and troubleshooting. Disconnect power from the machine before removing any cover and guards, and before attempting any service procedures.

W736

WARNING

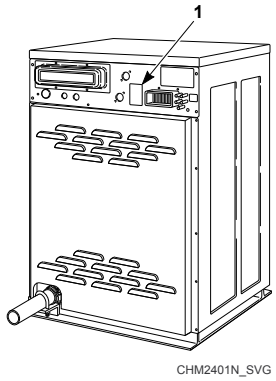
Hazardous Voltage. Can cause shock, burn or death. Verify that a ground wire from a proven earth ground is connected to the lug near the input power block on this machine.

W360

Electrical connections are made at the rear of the machine. The machine must be connected to the proper electrical supply shown on the serial plate on the rear of the machine, using copper conductors only.

IMPORTANT: Alliance Laundry Systems warranty does not cover components that fail as a result of improper input voltage.

Make sure the correct transformer jumper [208 Volt or 240 Volt] is in place. Refer to the “optional” Electrical Service Conversion label located on the back of the machine near the serial plate. Refer to *Figure 27* .



1. Electrical Service Conversion Label

Figure 27

Machines are equipped with an AC inverter drives requiring a clean power supply, free from voltage spikes and surges. Use voltage monitor to check incoming power.

Input Power Conditioning

The drive is suitable for direct connection to input power within the rated voltage of the drive. Listed in *Input Power Condition* are certain input power conditions which may cause component damage or reduction in product life. If any of the conditions exist, install one of the devices listed under the Possible Corrective Action(s).

IMPORTANT: Only one device per branch circuit is required. It should be mounted closest to the branch and sized to handle the total current of the branch circuit.

Input Power Condition	Possible Corrective Action(s)
Low Line impedance [less than 1% line reactance]	• Install Line Reactor • Isolation Transformer
Greater than 120 kVA supply transformer	
Line has power factor correction capacitors	• Install Line Reactor • Isolation Transformer
Line has frequent power interruptions	
Line has intermittent noise spikes in excess of 6000V [lightning]	
Phase to ground voltage exceeds 125% of normal line to line voltage	• Remove MOV jumper to ground • Install Isolation Transformer with grounded secondary [if necessary]
Ungrounded distribution system	
240V open delta configuration [stinger leg]*	• Install Line Reactor
* For drives applied on an open delta with a middle phase grounded neutral system, the phase opposite the phase that is tapped in the middle to the neutral or earth is referred to as the “stinger leg,” “high leg,” “red leg,” etc. This leg should be identified throughout the system with red or orange tape on the wire at each connection point. The stinger leg should be connected to the center Phase B on the reactor.	

Table 26

Input Voltage Requirements

For voltages above or below listed specifications, contact your power company or local electrician.

If machine is intended for four-wire service, a neutral leg must be provided by power company.

If a delta supply system is used on a four-wire model, connect high leg to L3.

IMPORTANT: Improper connections will result in equipment damage and will void warranty.

DANGER

Electrical shock hazard will result in death or serious injury. Disconnect electric power and wait five (5) minutes before servicing.

W810

DANGER

Hazardous Rotation Speed. Will cause serious injury when controlling AC inverter drive with a parameter unit, safety features are bypassed allowing basket to rotate at high speeds with the door open. Place large sign on front of machine to warn people of imminent danger.

W361

Circuit Breakers and Quick Disconnects

Single-phase machines require a single-phase inverse-time circuit breaker. Three-phase machines and V-speed machines require a separate, three-phase inverse-time circuit breaker to prevent damage to the motor by disconnecting all legs if one should be lost accidentally. Refer to *Electrical Specifications* section for model-specific circuit breaker requirements.

IMPORTANT: All quick disconnects should comply with the specifications. DO NOT use fuses instead of circuit breakers.

Connection Specifications

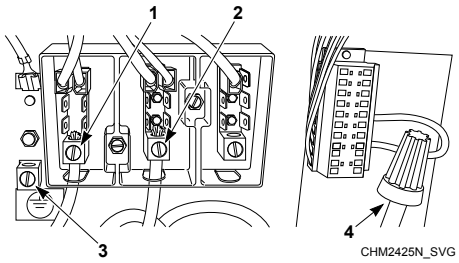
IMPORTANT: Connection must be made by a qualified electrician using wiring diagram provided with machine, or according to accepted European Union standards.

Connect machine to an individual branch circuit not shared with lighting or other equipment. Shield connection in a liquid-tight or approved flexible conduit. Copper conductors of correct size must be installed in accordance with National Electric Code [NEC] or other applicable codes.

Use wire sizes indicated in the Electrical Specifications chart for runs up to 50 feet [15 m]. Use next larger size for runs of 50 to 100 feet [15 to 30 m]. Use two sizes larger for runs greater than 100 feet [30 m].

Single-Phase Connections

For single-phase input, connect L1, L2 and Ground and cap neutral as shown in *Figure 28* .



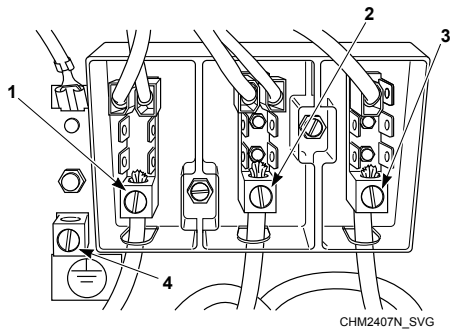
1. L1
2. L2
3. Ground
4. Neutral [capped]

Figure 28

Three-Phase Connections

For three-phase input, connect L1, L2, L3 and Ground as shown in *Figure 29* .

IMPORTANT: If a stinger leg is used for three-phase input, it MUST be connected to L3.



1. L1
2. L2
3. L3
4. Ground

Figure 29

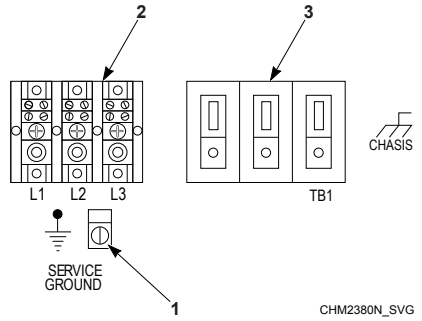
Grounding

For personal safety and proper operation, the machine must be grounded in accordance with state and local codes. If such codes are not available, grounding must conform to the National Electric Code, article 250 [current edition]. The ground connection must be made to a proven earth ground, not to conduit or water pipes.

WARNING

Electrically heated machines DO NOT require dual power sources. Do not connect customer power or customer load to the Internal Load Distribution terminal block. Refer to the machine electrical schematic for details.

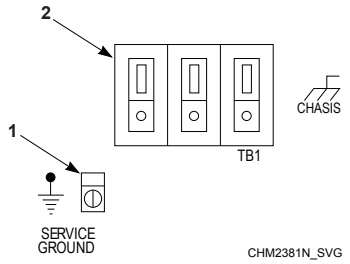
W759



Machines with Electric Heat

1. Grounding Lug: Connect to proven earth ground
2. Customer Input Power Terminals
3. Internal Load Distribution - DO NOT connect customer power source or load.

Figure 30



Machines without Electric Heat

1. Grounding Lug: Connect to proven earth ground
2. Customer Input Power Terminals

Figure 31

Machines can be converted for lower voltage operation and/or 50 Hz operation. Refer to conversion label by serial plate for details.

Phase Adder

IMPORTANT: Do not use a phase adder on any machine.

Thermal Overload Protector

For V-speed machines, the inverter drive provides overload protection for the drive motor.

Table 40

Steam Requirements (Steam Heat Option Only)

WARNING

Hot Surfaces. Will cause severe burns. Turn steam off and allow steam pipes, connections and components to cool before touching.

W505

For machines equipped with optional steam heat, install piping in accordance with approved commercial steam practices. Steam requirements are shown in *Table 41* . .

Steam Supply Information		
Steam inlet connection size, in. [mm]	40–100 pound*	1/2 [13]
	125 pound	3/4 [19]
Number of steam inlets		1
Required pressure, (min. - max. psi [bar])		30–80 [2.0–5.4]
Maximum pressure, psi [bar]		80 [5.4]

Steam Supply Information
* 20 and 30 pound models can be prep for steam and a kit is available for conversion.

Table 41

IMPORTANT: Failure to install the customer supplied steam filter may void the warranty.

Supply Dispensing

WARNING

Dangerous Chemicals. May damage eyes and skin. Wear eye and hand protection when handling chemicals; always avoid direct contact with raw chemicals. Read the manufacturer's directions for accidental contact before handling chemicals. Ensure an eye-rinse facility and an emergency shower are within easy reach. Check at regular intervals for chemical leaks.

W363

Supply Dispensing		
Capacities	**20–100**	**125**
Number of liquid chemical supply signals [OPL only]	4	4
Number of supply compartments	4	0 or 5 [optional]
Number of external liquid supply connections	5	5
Liquid supply connection size	3/8 in. [8 mm]	5/8 in. [15.9 mm]

Table 42

IMPORTANT: Undiluted chemical dripping can damage the machine. All chemical injection supply dispenser pumps and dispenser tubing should be mounted below the washer's injection point. Loops do not prevent drips if these instructions are not followed.

IMPORTANT: Failure to follow these instructions could damage the machine and void the warranty.

External Supplies

For proper communication between the machine and an external chemical supply system, it is important for the low-voltage signal power to be connected properly. The included wiring diagram shows several different options for safe and correct wiring of this interface.

The preferred method for connecting the wiring from the external chemical supply system to the machine is to use the 300mA power of the machine's 24VAC control transformer, which is intended strictly for this purpose. Other voltage and current options are available, but require some wiring changes and must be provided with an external power source. Under no circumstances should the high-voltage machine supply connections or source be used for the communication wiring.

Communication wiring connections, which include a single row of identified terminal blocks, can be found under a service panel at the upper back of the machine.

Chemical Injection Using Internal 24VAC Control Transformer

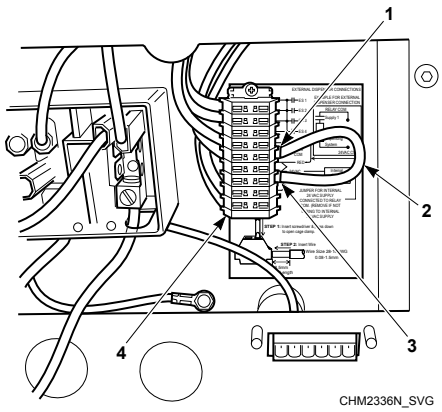
NOTE: Using the Internal 24VAC 300 Milliamp Control Transformer is recommended by Alliance Laundry Systems.

CAUTION

Do not attempt to increase fuse rating or alter wiring of external chemical supply terminal strip in such as way that may conflict with the suggested methods provided on the Optional External Supply Wiring Diagram.

W699

IMPORTANT: DO NOT remove the red jumper wire from the terminal strip.



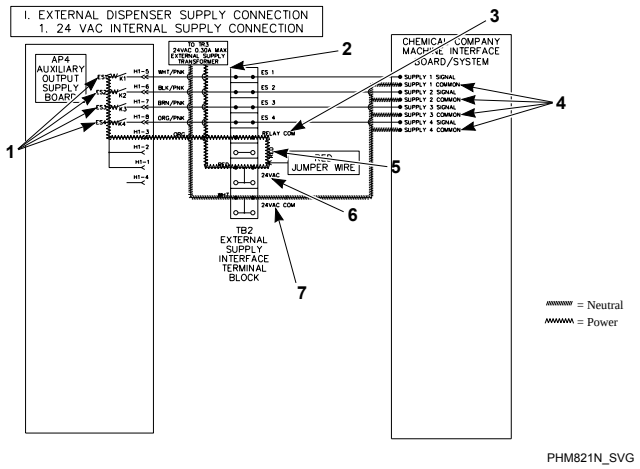
1. Relay Com
2. Red Jumper Wire
3. 24 VAC
4. Transformer

Figure 32

There are 3 terminals necessary for this connection option.

- Terminal "24VAC COM" is used to connect one side of the internal control transformer to the external dispenser input signals common.
- The second terminal is used to connect the other side of the control transformer to the machine output signals common through a red jumper wire between "24VAC" and "RELAY COM". Refer to *Figure 33* .

IMPORTANT: Do not use the transformer terminals if an external power supply is used.



1. External Supply Power Output
2. Internal Control Transformer
3. RELAY COM Terminal
4. External Dispenser Input Signal Common
5. Red Jumper Wire
6. 24VAC Terminal
7. 24VAC COM Terminal

Figure 33

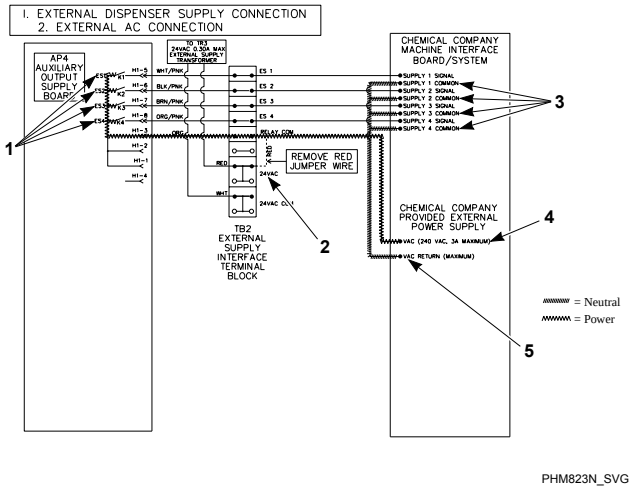
Chemical Injection Using External AC Power Source

NOTE: An External AC Power Source is NOT provided by Alliance Laundry Systems.

NOTE: Power for external supplies must not be derived from the high-voltage main power connection point.

IMPORTANT: The external power must supply power of 240VAC or less and be protected at 3 Amps or less.

1. Remove the red jumper wire installed by the factory between “24VAC”, and “RELAY COM”.
2. Connect one side of the external power to the “RELAY COM” and the other to the external dispenser input signals common. Refer to *Figure 34* .



1. External Supply Power Output
2. Red Jumper Wire
3. External Supply Input Signal Common
4. VAC Power Terminal
5. VAC RETURN Terminal

Figure 34

CAUTION

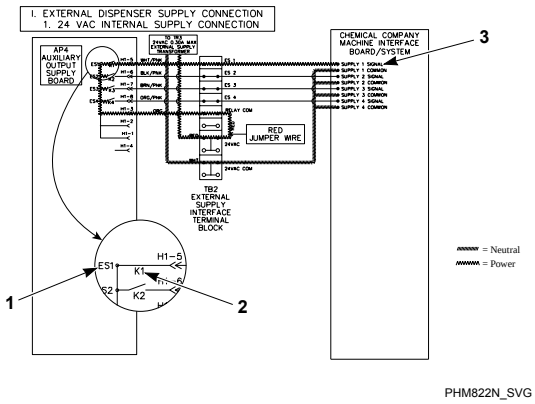
Do not attempt to increase fuse rating or alter wiring of external chemical supply terminal strip in such as way that may conflict with the suggested methods provided on the Optional External Supply Wiring Diagram.

W699

External Supply Signals

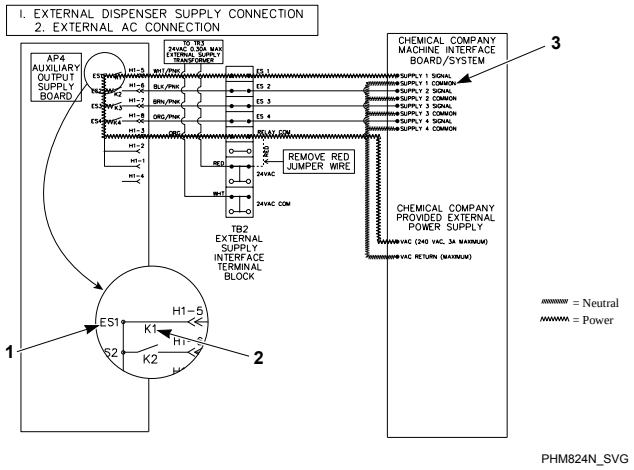
Wash-cycle signals are provided to the external chemical supply equipment and a "wait for the next step" signal can be received from the supply equipment.

For example, if ES1 is selected the K1 contact will close and power will be supplied to Supply 1 Signal. The contact will remain closed for the amount of time programmed in control. Refer to *Figure 35* for Internal Supply Connection or *Figure 36* for External AC Connection.



1. ES1 Power supply
2. K1 Contact
3. Supply 1 Signal

Figure 35



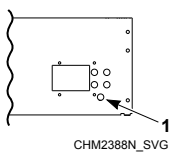
1. ES1 Power supply
2. K1 Contact
3. Supply 1 Signal

Figure 36

Connection of External Liquid Supplies

20–100 Pound OPL Models

1. Facing the rear of the machine, locate the five 3/8 inch supply hose connections found on the right-hand side of the valve panel. Refer to *Figure 37* .



Valve Panel-Rear View

1. External Supply Hose Opening

Figure 37

2. Drill through the five plastic holes on the valve panel for the external supply hoses as needed.

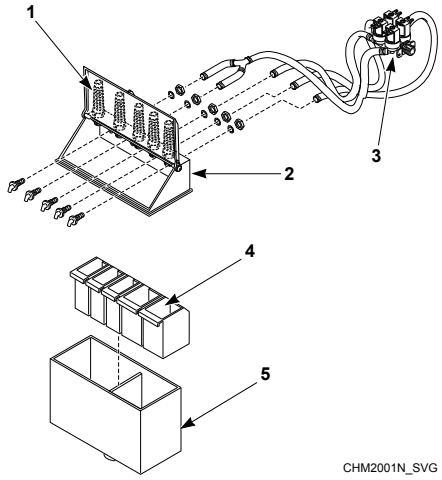
3. Remove plastic debris.
4. Attach the external supply hoses to the ports at each of the drilled holes.
5. Secure with proper clamps.

NOTE: Do not attempt to make chemical injection supply pump electrical connections to points other than those provided specifically for that purpose by the factory.

125 Pound OPL Models [With Optional Dispenser]

Refer to *Figure 38* .

1. Remove plugs from base. Plugs are assembled inside tubing ring.
2. Install strain reliefs with the seal nuts.
3. Insert tubes through base. Do not remove dry supply cups. Tube should extend into plastic cup, with exception of softener tube, which should be routed to outside of cup.
4. Tighten seal nut to prevent tubing from escaping assembly.



1. Strain Relief for Liquid Chemical Supply Lines
2. Supply Dispenser Lid
3. Four Way Water Valve
4. Dry Supply Cups
5. Supply Dispenser

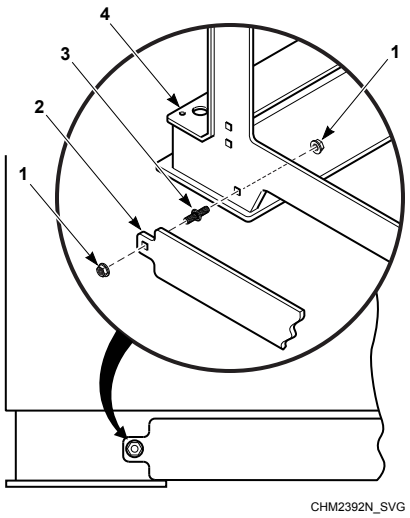
Figure 38

Start Up

Pallet Jack cover Plate Installation [80 and 100 Pound Models Only]

After machine is fully installed, the optional pallet jack cover plate can be installed.

1. Locate the two holes on the front of the machine base frame. Refer to *Figure 39* .



1. Nut
2. Cover Plate
3. Stud
4. Machine Base Frame

Figure 39

2. Using the hardware from removing plate from back panel, install the cover plate to the machine base frame. The square on stud goes into square hole in machine frame. Refer to *Figure 39* .

Basket Rotation

Check that basket rotation is counterclockwise in the extract step.

1. If rotation is not counterclockwise, disconnect power to machine.
2. Have a qualified electrician reverse any two motor leads at the inverter terminal block.

Operation

Operating Instructions

1. Turn on main power source [circuit breaker].
2. Turn handle clockwise to open. Refer to *Figure 40* .

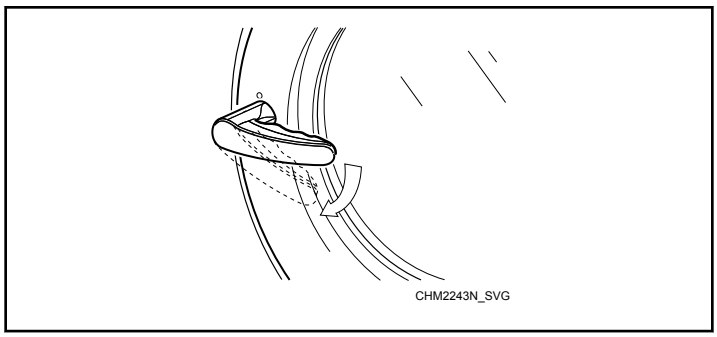


Figure 40

3. Load to capacity whenever possible. DO NOT OVERLOAD. Refer to *Figure 41* .

   NOTE: Underloading can cause out-of-balance conditions that can shorten machine life.

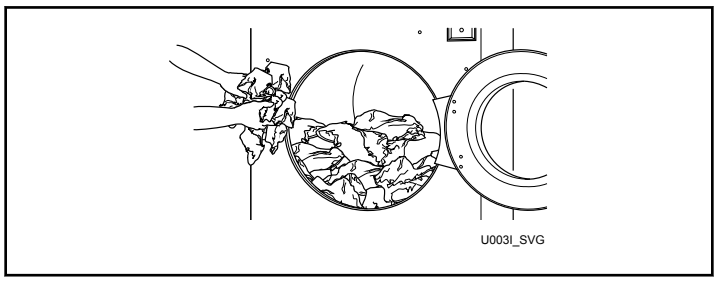

Figure 41

4. Close door and turn handle counter clockwise. Refer to *Figure 42* .

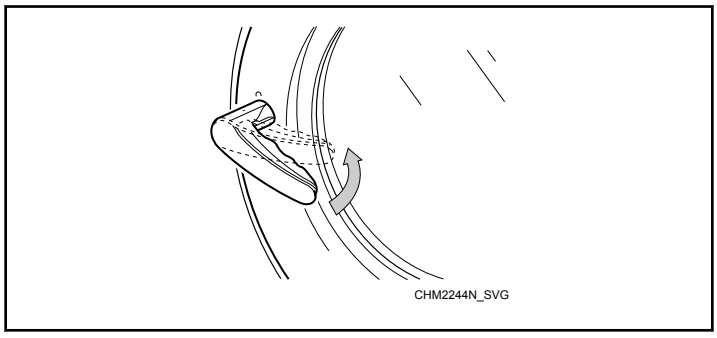

Figure 42

5. The default wash cycle will display.

WARNING

To prevent personal injury, avoid contact with inlet water temperatures higher than 125° Fahrenheit [51° Celsius] and hot surfaces.

W748

6. Select the desired soil setting [select models only], cycle setting [select models only] and cycle/temperature. The LED indicator(s) for that cycle will light.

CAUTION

Water cannot be extracted from rubber backed items. To avoid damage to machine from out of balance conditions, do not use a spin (extract) step when washing rubber backed items. Warranty will be voided.

W880

7. Add liquid and/or powder supplies to supply dispenser. Refer to *Table 43* .
   a. Detergent:
      - Liquid - Compartment 1 [prewash] + Compartment 3
      - Powder - Compartment 1 [prewash] + Compartment 2
   b. Bleach:
      - Liquid - Compartment 3
      - Powder - Compartment 2
   c. Softener:
      - Liquid - Compartment 4
8. For vended models only, insert coin(s) or card as necessary.
   - If the machine is a coin operated unit, add coins. As each coin is added, the vend counts down to the amount remaining.
   - If the machine is a card operated unit, insert and remove card per card system instructions.
   - If the unit is interfaced to a central/remote pay system, go to the central/remote pay console, make payment and select the machine and follow central/remote pay system instructions.
9. Press the START keypad.
10. During first fill, the desired wash cycle can be changed. After first fill has ended, the wash cycle active at that moment remains the chosen wash cycle.
11. When cycle is complete, display shows “00”.

Table 43

Maintenance

Maintenance

WARNING

Sharp edges can cause personal injury. Wear safety glasses and gloves, use proper tools and provide lighting when handling sheet metal parts.

W366R1

IMPORTANT: Replace all panels that are removed to perform service and maintenance procedures. Do not operate the machine with missing guards or with broken or missing parts. Do not bypass any safety devices.

Daily

WARNING

Do not spray the machine with water. Short circuiting and serious damage may result.

W782

IMPORTANT: Door lock should be checked daily to ensure proper operation. Also check that all safety and instruction stickers are on the machine. Any missing or illegible safety instructions stickers should be replaced immediately.

Beginning of Day

1. Check door interlock before starting operation:
   a. Attempt to start the machine with the door open. The machine should not start.
   b. Close the door without locking it and start the machine. The machine should not start.
   c. Attempt to open the door while the cycle is in progress. The door should not open.

If the door lock and interlock are not functioning properly, disconnect power and call a service technician.

IMPORTANT: Door lock should be checked daily to ensure proper operation. Also, check that all safety and instruction stickers are on the machine. Replace as necessary.

2. Inspect water inlet valve hose connections on the back of the machine for leaks.
3. Inspect steam hose connections for leaks (where applicable).
4. Inspect all chemical inlets, lines and connections for leaks.

WARNING

To reduce the risk of electrical shock, serious injury or death, disconnect the electrical power to washer-extractor before examining the wiring.

W636

5. Verify that insulation is intact on all external wires and that all connections are secure. If bare wire is evident, call a service technician.

End of Day

1. Clean the door gasket of residual detergent and all foreign matter.
2. Clean the door glass with a damp cloth.
3. Clean automatic supply dispenser lid and general area.
4. Clean the machine's top, front and side panels with mild detergent. Rinse with clean water. DO NOT use products that contain alcohol on the control panel.
5. Inspect and clean basket.
6. Clean the inverter drive box filter(s) weekly or more frequently as needed [where applicable]:
   a. Wash the filter with warm water and allow filter to air dry. As an alternative, the filter may be vacuumed clean.

NOTE: Unload the machine promptly after each completed cycle to prevent moisture buildup. Leave loading door open after each completed cycle to allow moisture to evaporate.

Weekly

1. Check the machine for leaks.
   a. Start an unloaded cycle to fill the machine.
   b. Verify that door and door gasket do not leak.
   c. Verify that the drain valve is operating and that the drain system is free from obstruction. If water does not leak out during the first wash segment, the drain valve is closed and functioning properly.
2. Clean the inverter drive box filter(s) weekly or more frequently as needed [where applicable]:
   a. Wash the filter with warm water and allow filter to air dry. As an alternative, the filter may be vacuumed clean.

IMPORTANT: The control module cover and fan filter must be in place for the fan to properly cool the inverter drive. Failure to observe this warning will void the warranty and could lead to expensive inverter drive repair.

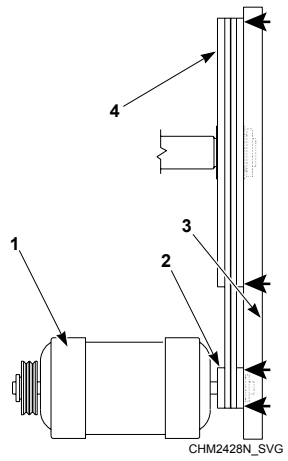
3. On machines equipped with an automatic chemical supply system, check chemical connections by inspecting all connections and chemical hoses for leaks or cracks.

IMPORTANT: Chemical leaks can quickly cause permanent damage to the machine components and structure.

Monthly

NOTE: Disconnect power to the machine at its source before performing the monthly maintenance procedures.

1. Check belt(s) require replacement or adjustment. Call a qualified service technician in either case.
   a. Check belt(s) for uneven wear and frayed edges.
   b. For groove-pulley drive systems, verify alignment by placing a straightedge across both pulley faces. The straightedge should make contact with the pulleys in four places. Refer to *Figure 43* . After making necessary adjustments, torque the upper spring tensioning jam nut to 20.6 ± 2 ft.-lbs.



1. Motor
2. Motor Pulley
3. Straightedge
4. Basket Pulley

Figure 43

   c. For flat-pulley drive systems, verify allowable distance of belt from edge of basket pulley. Refer to *Flat-Pulley Alignment* .

Flat-Pulley Alignment	
Model	**Minimum Allowable Distance from Edge**
20	.09 in. [2 mm]
30	.09 in. [2 mm]
40	.09 in. [2 mm]
60	.38 in. [10 mm]

Table 44

Belt Tension by Frequency or Belt Tension Gauge			
Model*	**Frequency [Hz]**	**Belt Tension [lbs.]**	**Tension Gauge**
20 [1 HP]	95 ± 4	40 ± 3	176 ± 15
80-100	102 ± 4	132 ± 10	588 ± 45
* 20 pound 2 HP High Voltage and all 30, 40 and 60 pound Models are self-tensioning and do not require any adjustment.			

Table 45

2. **For 80 through 125 pound capacity models only**, lubricate bearings and seals each month OR after every 200 hours of operation.
   a. Use a premium-grade lithium-based #2 grease. Never mix two types of grease, such as petroleum and silicone.
   b. Pump the grease gun slowly, permitting only the following number of strokes:
      - Bearing grease fittings, 2 strokes each
      - Seal grease fitting, 2 stroke [125 pound models only]

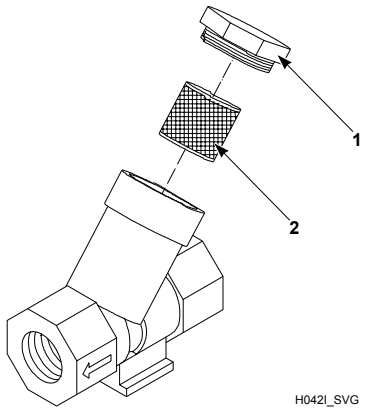
   NOTE: Do not pump the grease gun until grease comes out of the bearing housing. This can result in over lubrication, causing damage to bearings and seals.
3. Check overflow hose and drain hose for leaks.
4. Check the supply dispenser hoses and hose connections.
5. Clean inlet hose filter screens:
   a. Turn water off and allow valve to cool, if necessary.
   b. Unscrew inlet hose and remove filter screen.

c. Clean with soapy water and reinstall. Replace if worn or damaged.

Quarterly

NOTE: Disconnect power to the machine at its source before performing the quarterly maintenance procedures.

1. Tighten door hinges and fasteners, if necessary.
2. Tighten anchor bolts, if necessary.
3. Tighten anchor bolts as specified in the *Machine Mounting and Grouting* section, if necessary.
4. Verify that the drain motor shield is in place and secure, if so equipped.
5. Clean customer-supplied steam filter, where applicable. Refer to *Figure 44* .
   a. Turn off steam supply and allow time for the valve to cool.
   b. Unscrew cap.
   c. Remove element and clean.
   d. Replace element and cap.



1. Cap
2. Steam Filter Element

Figure 44

6. Check the bearing mounting bolts to make sure they are torqued properly. Refer to *Torque* .

Torque		
Machine Capacity	**Bearing**	**Torque**
20	All	41 ft.-lbs.
30-40	All	101 ft.-lbs.
60	All	201 ft.-lbs.
80-100	All	357 ft.-lbs.
125	All	201 ft.-lbs.

Table 46

7. Tighten motor mounting bolt locknuts and bearing bolt locknuts.
8. Vacuum lint from motor vents.
9. Clean all electronic boards of moisture and dust with canned air.
10. Verify the insulation is intact on all external wires and that all connections are secure. If bare wire is evident, call a service technician.
11. Clean inverter drive cooling fan blades [where applicable].

Care of Stainless Steel

- Remove dirt and grease with detergent and water. Thoroughly rinse and dry after washing.
- Avoid contact with dissimilar metals to prevent galvanic corrosion when salty or acidic solutions are present.
- Do not allow salty or acidic solutions to evaporate and dry on stainless steel. Wipe clean of any residues.
- Rub in the direction of the polish lines or “grain” of the stainless steel to avoid scratch marks when using abrasive cleaners. Use stainless steel wool or soft, non-metal bristle brushes. Do not use ordinary steel wool or steel brushes.
- If the stainless steel appears to be rusting, the source of the rust may be an iron or steel part not made of stainless steel, such as a nail or screw.
- Remove discoloration or heat tint from overheating by scouring with a powder or by employing special chemical solutions.
- Do not leave sterilizing solutions on stainless steel equipment for prolonged periods of time.
- When an external chemical supply is used, ensure no siphoning of chemicals occurs when the machine is not in use. Highly concentrated chemicals can cause severe damage to stainless steel and other components within the machine. Damage of this kind is not covered by the manufacturer’s warranty. Locate the pump and tubing below the machines’s injection point to prevent siphoning of chemicals into the machine.

Disposal of Unit

This appliance is marked according to the European directive 2002/96/EC on Waste Electrical and Electronic Equipment (WEEE).

This symbol on the product or on its packaging indicates that this product shall not be treated as household waste. Refer to *Figure 45* . Instead it shall be handed over to the applicable collection point for the recycling of electrical and electronic equipment. Ensuring this product is disposed of correctly will help prevent potential negative consequences for the environment and human health which could otherwise be caused by inappropriate waste handling of this product. The recycling of materials will help to conserve natural resources. For more detailed information about recycling of this product, please contact the local city office, household waste disposal service, or the source from which the product was purchased.

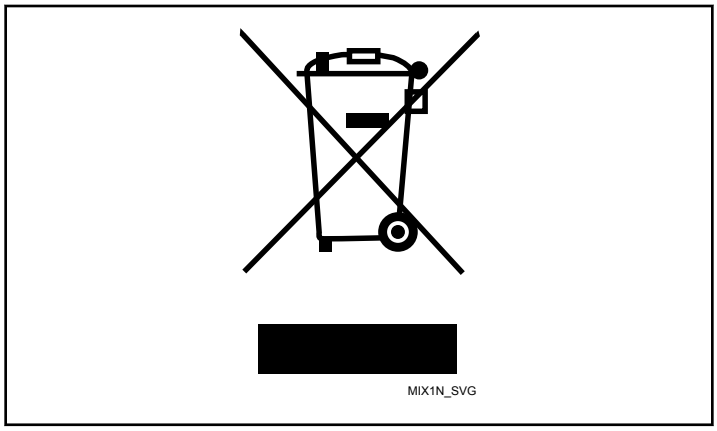


Figure 45
